

To Whom it may Concern:

Please STOP this nonsense about taking away my weather/traffic from XM Sattelite Radio. The real problem is that your consumers are sick of the crap that is aired on the radio stations across America and so our society is looking at other alternatives to get their local information. Commercials, commentary and chatter has taken the place of music on most stations across our Nation and it is about time that things changed.

XM radio goes with my family, friends and me wherever we go. Change the Political schemes of RADIO and you might start getting listeners back. Isn't that truly what this is all about??
Thank you for your time.
